PATENTED EXCELLENCE™ SH46

Buccaneer's patented SH46 special alloy is a unique material formulated to outlast all previous formulas for chrome wear parts used in abrasive pumping conditions.

OPTION TO REPLACE

The Buccaneer Pump range offers customers the SH46 as a quality option to replace all their standard 27% high chrome wear parts, which come standard on slurry pumps currently used in abrasive applications.

"™SH46 is one of the best high-chrome alloys you can purchase in the industry. Buccaneer is proud to own it."

A SOLID FOUNDATION

Buccaneer Slurry Pumps is a strong and reliable South African brand in the pumping industry, and a name that continues to rise to the challenges within the local mining sector. The brand itself has a reputation for its robust and heavy-duty slurry pumps - manufactured to exceed all quality and performance standards when used under any abrasive or corrosive application.

Every pump is backed by Buccaneer's After Sales Service and Quality Assurance programme; which includes installation and commissioning, onsite breakdown repairs, pump servicing and customer training. The entire product range is designed, manufactured and assembled locally under one roof, giving control on quality and allowing Buccaneer to streamline its workflow.

THE RESULT

More time to focus on its core business purpose:

"Customer satisfaction through superior service delivery".

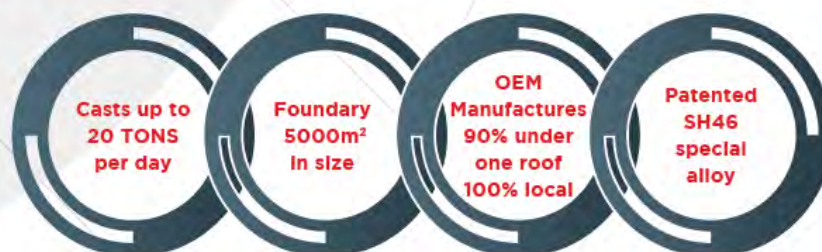

Buccaneer has made its mark in providing solutions to the mining industry with a range of horizontal and vertical centrifugal pumps.

THE INDUSTRY STANDARD FOR SLURRY APPLICATIONS

OUR SERVICES

PRECISION FOUNDRY CASTING

* Consulting

Slurry Pump Services Africa & Buccaneer Pumps offers on site consultation and training on the safety and maintenance of slurry pump application.

MAINTENANCE AND SERVICE

On standby 24/7

SPARES

Our in-house manufactured spares are readily available on request.

A SOUTH AFRICAN RANGE

HD METAL PUMP RANGE

DESIGNED: for corrosive and erosive slurries

A combination of wet end materials are available such as chrome, rubber, various grades of stainless steel and alloys - as well as Buccaneer's patented™SH46 material.

MD PUMP RANGE

DESIGNED: as a cost-effective solution to medium duty slurry applications

The design allows for easy maintenance.

PUMP FEATURES

- Bearing Assembly
- Short overhang on shaft design, assists with shaft deflection and vibration
- Dimensional interchangeability to suit heavy duty bearing assemblies

CASING LINERS

- Solid casing design
- Ease of rotation and maintenance on casing with improved clamp design

IMPELLER

- Various impeller designs to suit any application
- Impeller adjustment via bearing assembly
- Expulsion vanes on impeller shroud minimise recirculation and reduce pressure in the stuffing box
- Various materials to suit any application

ALH / FP PUMP RANGE

DESIGNED: to offer reliability in dewatering and process water applications

The pumps are supplied standard with high-chrome wet ends and are available with stuffing box or expeller sealing arrangements. Alternative materials available on request.

VS TV / MD-TV PUMP RANGE

DESIGNED: suited to all sump applications: spillage, slurry transfer etc

Various column lengths and materials of construction are available.

Chrome and stainless steel are suited for corrosive and/or abrasive sump applications.

VS / HD-SP PUMP RANGE

DESIGNED: the vertical spindle range is suited for all sump applications: spillage and carbon transfer

Available in different spindle lengths and materials of construction.

HD HEAVY DUTY PUMP RANGE

TYPICAL EXPLODED VIEW

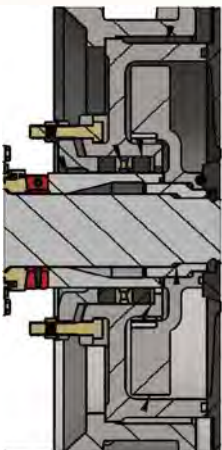

HD Metal lined - Stuffing box seal

HD Rubber lined - Stuffing box seal

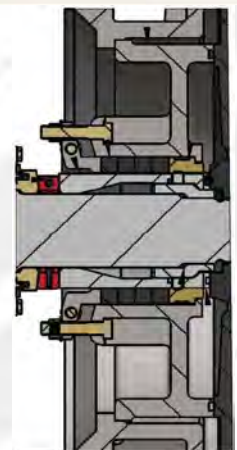

Sealing arrangements

Expeller

Full flow stuffing box

Low flow stuffing box
