- ME/MG-20 ALL METAL PUMP 1500KPA

All of these new pumps are manufactured by CES in South-Africa from scratch by making use of various production iron foundries that cast these pump parts using our approved and privately owned patterns. All machining is done in house at our premises in Carletonville. We cast in various different materials depending on the requirement of the end user or the required approved specification. We manufacture in materials: EN9, Bronze, Cast Iron, SG Iron, 27% High Chrome Iron, 316 Stainless Steel and various other materials. All pumps are provided with material & test certificates.

We do have various repair contracts in place for the repair & service of all these pumps that are in use on the mines. We repair pumps on a daily basis and have been doing so for the past 34 years. We can repair most pumps in the industry. We ensure that the quality is of satisfactory quality by using only premium brand materials and parts. We try to keep our delivery times to minimum on all repairs to ensure that there is no down time or lost production with the end user.

We keep stock on the floor of most of the above pumps at our premises. We deliver countrywide. All of these pumps have a complete after sales service and full back up with all the different parts & components that might be required. We ensure that our pumps are fully interchangeable with your current pump that you have in production.
